LETTER FROM PRES. OF TEXAS FARMERS' UNION

APPROVES COURSE IN PETITIONING WILSON TO CALL EXTRA SESSION TO AID THE COTTON SITUATION.

Fort Worth, Tex., Oct. 7.—Henry N. Pope, president of the Texas Farmers' union, has addressed the following open letter to the editor of the Farmers' Fireside Bulletin, Arlington, Texas:

Dear Sir and Brother: My article on education is past due, on account of matters of instant importance on cotton and finance. These things must have our constant attention at this time, even matters of grave importance must give way to our present marketing needs and financial

IN FIVE MINUTES! NO INDIGESTION, GAS OR SOUR, ACID STOMACH

The Moment "Pape's Diapiesin" reaches the stomach all distress goes.

"Really does" put bad stomachs in order—"really does" overcome indigestion, dyspepsia, gas, heartburn and sourness in five minutes—that—just that—makes Pape's Diapiesin the largest selling stomach regulator in the world. If what you eat ferments into stubborn lumps, your belch gas and eructate sour, undigested food and acid; head is dizzy and aches; breath foul; tongue coated; your insides filled with bile and indigestible waste, remember the moment "Pape's Diapiesin" comes in contact with the stomach all such distress vanishes. It's truly astonishing—almost marvelous, and the joy is its harmlessness.

A large fifty-cent case of Pape's Diapiesin will give you a hundred dollars' worth of satisfaction or your druggist hands you your money back.

It's worth its weight in gold to men and women who can't get their stomachs regulated. It belongs in your home—should always be kept handy in case of a sick, sour, upset stomach during the day or at night. It's the quickest, surest, and most harmless stomach doctor in the world.

necessities. We have got to watch this cotton problem from every angle of speculative tactics, and give our moral support and co-operative efforts to any individual or state who raises its voice in support of the cotton producers of the south. Unfortunately there is only one southern legislature in session at this time. Every legislature in the south should have been convened in special session, to have taken action along the line the Alabama legislature has recently done. If they had I am constrained to believe there might have been a more rigid policy pursued in dealing with England on her declaring cotton a contraband of war, so our cotton could have had the advantage of the high seas, and been shipped to all the markets of the world. Cotton would today be bringing 29c per pound. Read the following resolution adopted by the Alabama legislature recently, which was given me by a well known member of the Farmers' union of Texas, who went to Alabama on purpose to try and have its legislature take such action

"H. J. R. 196, by Mr. Darden."

"Whereas, Great Britain has placed cotton on the contraband list as a war measure; and,

"Whereas, the action of Great Britain is a masked effort to reduce the price of cotton, so that her buyers and those of English corporations and firms and corporations may come into the south and buy cotton at a greatly reduced price, below the cost of production; and

"Whereas, Great Britain is purchasing many munitions of war, ammunition, etc., from the United States with which to carry on the war with other European nations; therefore, be it

"Resolved, by the house, the senate concurring, that the president of the United States be petitioned by this body to call an extraordinary session of congress, and submit to it recommendation of the passage of such laws as will prevent persons, firms or corporations in the United States from selling arms, ammunition and other munitions of war to Great Britain until such time as she shall take cotton from the contraband list.

"Resolved, further, that the newspapers of Alabama are requested to give as much publicity to this resolution as possible, and that they also work a sentiment along this line, and that citizens, individuals, firms and corporations write letters to their representatives in congress urging them to support and actively work for such measures as the president may recommend to congress in an effort to keep the cotton crop of 1915-16 from being sacrificed."

Suppose Wilson Had Complied. Now, suppose President Wilson had

complied with the above resolution, and he doubtless would if every southern state had demanded it through their legislatures, and congress had passed a law forbidding the sale and shipment of munitions of war to England, or any of her dependent provinces, so long as she maintained her embargo on cotton as contraband of war. Everybody knows that England would have yielded at once, and she must have guns and munitions if she is to succeed in this war. Everybody knows that this is a war for commercial supremacy; in other words, it is a dollar war, and if America is going to aid any of the belligerents by selling them guns and ammunition, I certainly think the producers of America should have the advantage of the markets of the world with all of their products, but such is not the case, and the farmer as usual is the man to be discriminated against, even to placing our raw material on the free list, while the finished products of our raw products have been protected. Every appeal the southern farmer has made for help during this crisis, brought on by the European war, has been treated with silent contempt and beared into the corner of no help for the farmer, but cheap money by the billions for the banks and foreign nations.

I see that the postoffice department has gone back to jute wrapping twine. So much for the consumption of cotton in this country. We have got to knock out contraband decrees, and give cotton free access to all the countries of the world, and using in our own country jute twine, leaves our own cotton behind. How are we going to promote a greater consumption of cotton.

Mrs. William Bacon of Greenville, Texas, is right now planning an advertising scheme for a greater use of cotton by selecting fifty pretty Texas girls, and they are the most beautiful in the world, and dress them up in all-cotton dresses, and have them in attendance at the Dallas fair for the purpose of demonstrating that cotton materials can be used for any advantage, for all classes of clothing. Mrs. Bacon deserves great credit for her activity and unswerving devotion to the interests of the cotton producers of the south in trying to bring about a greater use of cotton goods.

Mrs. Bacon, the president of the Farmers' Union of Texas, takes off his hat to you, and tenders you the thanks of the farmers of Texas for your loyal and untiring efforts in their behalf.

All farmers and business men, and especially their wives and families,

Girls! Draw a Moist Cloth Through Hair, Double Its Beauty

Try this. Hair gets thick, glossy, wavy and beautiful at Once.

Immediate?—Yes! Certain?—that's the joy of it. Your hair becomes light wavy, fluffy, abundant and beautiful as a young girl's after a Danderine hair cleanse. Just try this—moisten a cloth with a little Danderine and carefully draw it through your hair, taking one small strand at a time. This will cleanse the hair of dust, dirt or excessive oil, and in just a few moments you have doubled the beauty of your hair. A delightful surprise awaits those whose hair has been neglected or is scraggy, faded, dry, brittle or thin. Besides beautifying the hair, Danderine dissolves every particle of dandruff; cleanses, purifies and invigorates the scalp, forever stopping itching and falling hair, but what will please you most will be after a few weeks' use, when you see new hair—fine and downy at first—yes—but really new hair growing all over the scalp. If you care for pretty, soft hair, and lots of it, surely get a 25 cent bottle of Knowlton's Danderine from any drug store or toilet counter and just try it.

should not fail to see those fifty young ladies; if you do you will miss the best part of the Dallas fair. Of course, every young man in Texas who goes to the fair will see them, and go home with his mind thoroughly made up that cotton clothes are good enough for him.

Brother Farmer, there are many angles to this cotton question, and it is going to require long and continued effort and steady co-operation to work out our salvation that is wrapped up in cotton. Farmers, hold your cotton; when the price gets up to where they think you will sell, and you actually go to selling and rushing your cotton on the market, then the price will stop going up for a while; why should it continue to go up? The spinner and the speculator want to buy it, and why should they bid any higher for it when you are selling it as fast as you can at their price? They know it is going higher, and the speculator is buying it and storing it away for the higher prices that everybody knows are bound to come soon. Any man can hold cotton that has the cotton to put up as collateral. If you haven't but one bale, hold it until Gabriel blows his trumpet—then it is no longer a contraband, made by hand.

Hold Your Cotton Seed.

Cotton seed is going to break the record on high prices. You had just as well get those prices as anybody else, and you can get them by holding your seed.

Many thanks to you, gentle reader, for your patience. Yours fraternally,
HENRY N. POPE,
President Farmers' Educational and Co-operative Union of Texas.

LIVED EIGHT YEARS ON CRACKERS

Kate Stiferman of Oklahoma City. Restored After Long Period of Suffering.

Kate Stiferman of Capitol Hill, Oklahoma City, lived on crackers for eight years. She was a sufferer from chronic stomach troubles.

She got a bottle of May's Wonderful Remedy. The result of the treatment, she declares, was marvelous. She wrote:

"One bottle of your remedy cured me of my stomach troubles. I can now eat anything that I want to with good results, after living on crackers for eight years—and at times I could not even eat them. I have three sisters affected the same way and I want to surprise them by the way I can eat now."

May's Wonderful Remedy gives permanent results for stomach, liver and intestinal ailments. Eat as much and whatever you like. No more distress after eating, pressure of gas in the stomach and around the heart. Get one bottle of your druggist now and try it on an absolute guarantee—if not satisfactory money will be returned.

For sale by the City Drug Store and all other reliable druggists.

RECOGNITION OF CARRANZA.

Washington, Oct. 8.—Indications today, on the eve of the Pan-American conference, point to the Carranza government in Mexico receiving early recognition. The only impediment is believed to be some development complicating the situation. Recognition will be based, or recorded, on Carranza's statements showing military supremacy in Mexico and the protection of foreigners, religious freedom and amnesty to political prisoners.

USE "CASCARETS" FOR LIVER AND BOWELS WHEN CONSTIPATED

When bilious, headachy, sick, for sour stomach, bad breath, bad colds.

Get a 10-cent box.

Take a Cascaret tonight to cleanse your Liver, Stomach and Bowels, and you will surely feel great by morning. You men and women who have headache, coated tongue, a bad cold, are bilious, nervous, upset, bothered with a sick, gassy, disordered stomach, or have backache and feel all worn out. Are you keeping your bowels clean with Cascarets—or merely forcing a passageway every few days with salts, cathartic pills or castor oil?

Cascarets immediately cleanse and regulate the stomach, remove the sour, undigested and fermenting food and foul gases; take the excess bile from the liver and carry off the constipated waste matter and poison from the bowels.

Remember, a Cascaret tonight will straighten you out by morning. A 10-cent box from your druggist means healthy bowel action; a clear head and cheerfulness for months. Don't forget the children.

SCIENCE VERSUS DIPHThERIA, BY STATE BOARD OF HEALTH

Nothing so quickly strikes terror to the mother's heart as the discovery that her child has diphtheria. Its progress is so rapid that death quickly follows, unless effective treatment is promptly administered. But science is preventing the ravages of diphtheria, just as it is granting immunity against typhoid and yellow fever. Precaution against diphtheria by giving immunizing doses of diphtheria antitoxin is what saves life. The New York City health department has accurate statistics showing that in more than 80,000 cases in which immunizing doses were given, only 182, or 2 per cent, developed diphtheria, and of those 182 cases only one died. Science has never rendered a finer service to humanity.

Diphtheria is an acute infectious disease caused by the *Clostridium* bacillus, which grows upon any mucous and upon the skin itself when the epidermis has been removed. The bacillus is sometimes found in the blood. These germs generate a toxin or poison at the point of infection. This poison is absorbed by the lymphatic glands, from which it enters the blood and is carried to all parts of the body, affecting every tissue and every organ. At places of infection where germs grow, a false membrane is formed. There is no such disease as "membranous croup." Beware of anything resembling it.

Excessive rainfall and dampness, unusual quantities of decaying vegetation, and poor sanitary methods in many localities during the last six months have exposed Oklahoma to outbreaks of diphtheria during the ensuing fall and winter, according to Health Commissioner Duke. All unhealthy conditions that breed disease should be destroyed, and in all homes there should be liberal use of disinfectants, with lots of sunshine and ventilation.

The appearance of a case of diphtheria in a neighborhood should be met as quickly as an outbreak of fire. In addition to rigid quarantine of cases, it is often an exercise of the greatest wisdom to immunize all children in public schools, which should be closed if there is apparent danger of an epidemic.

For all persons more than one year of age, the immunizing dose should never be less than 1,000 units, and where there has been exposure to infection for five or six days, the dose should be 15,000 units. In infants less than one year and more than six months old should receive from 500 to 1,000 units, from which the dose may be graduated to 100 units for a baby only a few days old. The anti-toxine is harmless. Failure to use it is generally fatal. Diphtheria destroys both the old and the young.

Parents should know that enlarged tonsils and adenoids, common among children, predispose to inflammatory conditions of the throat and even under normal conditions it is best to remove them. But this should not be done during an epidemic of diphtheria, as the raw surface of the temporary wound due to the operation is extremely susceptible to infection by the diphtheria germ.

If diphtheria should enter a household, the latter should be instantly and rigidly quarantined. Preferably the patient should be sent to a hospital. The quarantine should include all persons in whom the bacilli are present. The patient should be kept in a room that can be cut off from all other rooms. The ventilation should be good, with plenty of sunshine and fresh air. All rugs, carpets, curtains, and unnecessary articles of furniture should be removed and carefully disinfected. This includes all animal pets. No food should be allowed to stand in the room, nor visitors allowed. Only those in charge of the patient should be admitted to the room. All toys or playthings should be thoroughly disinfected or burned at the termination of the disease. Expectoration should be upon clothes, all burned, or placed in a five-per cent carbolic acid solution until they can be burned. Bed clothing, etc., should be placed in this solution and then thoroughly boiled.

The best available physician should be called the moment diphtheria is suspected. If the symptoms are confusing at first, waste no time, but administer anti-toxine at once. This should be done even in supposed spasmodic croup, if the attack fails

to subside in three or four hours. If the patient has been ill from 24 to 36 hours, give not less than 5,000 units. The dose for infants under one year in developed cases should be at least 3,000 units; for adults, 10,000 to 15,000 units.

The diet should be milk alone until the throat is clear of membrane, and the pulse rate below 100 beats a minute. The mildest case should be kept in bed not less than ten days; serious cases, from three weeks to a month, according to their pulse rate and heart condition. It is extremely dangerous to allow a child to leave its bed when its pulse rate is more than 100.

MOTHER! DON'T TAKE CHANCES IF CHILD'S TONGUE IS COATED

If cross, feverish, sick, bilious, clean little liver and bowels.

A laxative today saves a sick child tomorrow. Children simply will not take the time from play to empty their bowels, which become clogged up with waste, liver gets sluggish, stomach sour.

Look at the tongue, mother! If coated, or your child is listless, cross, feverish, breath bad, restless doesn't eat heartily, full of colic or has sore throat or any other children's ailment, give a teaspoonful of "California Syrup of Figs," then don't worry, because it is perfectly harmless, and in a few hours all the constipation poison, sour bile and fermenting waste will gently move out of the bowels, and you have a well, playful child again. A thorough "inside cleansing" is oftentimes all that is necessary. It should be the first treatment given in any sickness.

Beware of counterfeit fig syrups. Ask your druggist for a 50-cent bottle of "California Syrup of Figs," which has full directions for babies, children of all ages and for grown-ups plainly printed on the bottle. Look carefully and see that it is made by the "California Fig Syrup company."

B. & O. TRAIN ROBBED TODAY

Loot Believed to be Large. One Estimate Being Half Million.

Wheeling, W. Va., Oct. 8.—Two masked men early today held up and robbed a Baltimore & Ohio express train, running between New York and St. Louis, near here.

The plunder was taken from the mail cars and is believed to be large. One report from Clarksburg, where the officials have their headquarters, said it was estimated that the value of the loot was half a million dollars. It is said that in one car, which the robbers did not take, was two million dollars in gold. The passengers, numbering one hundred, formed a posse and are now in pursuit.

FIERY RED SKIN ON CHILD'S FACE

Came on Limbs. Pimples Under Skin. Clothing Irritated. Itched and Burned. Restless at Night. Used Cuticura Soap and Ointment. In a Month Face Normal.

R. F. D. No. 2, Mooresville, N. C.—"My little boy's affection began with fiery red skin on his face. Later it came on his limbs. There were small pimples under the skin. It was inflamed at times worse than others. His clothing irritated it very much. The breaking out on his face looked very badly; it looked as if it would bleed. It seemed to itch and burn when rubbed. He was restless at night.

"He had the affection for four months or more before I tried Cuticura Soap and Ointment. First I tried a sample of each and before I had the sample used a marked improvement could be seen. I then bought a cake of Cuticura Soap and a box of Cuticura Ointment and in a month his face was normal again without any scars." (Signed) T. S. Deaton, Oct. 1, 1914.

Sample Each Free by Mail With 32-p. Skin Book on request. Address post-card "Cuticura, Dept. T, Boston." Sold throughout the world.
